**Coupled Inductor – JA4590-AL**

- Developed for Texas Instruments TPS40210 Current Mode Boost Controller.
- 1:1 coupled inductor with a coupling coefficient >0.95.
- Can be used as a transformer or as an inductor in SEPIC and Zeta applications.

**Core material**
Ferrite

**Terminations**
RoHS compliant matte tin over nickel over phos bronze.

**Weight**
10.8 g

**Ambient temperature**
-40°C to +85°C with Irms current, +85°C to +125°C with derated current

**Storage temperature**
Component: -40°C to +125°C.
Tape and reel packaging: -40°C to +80°C

**Winding to winding isolation**
500 Vrms

**Resistance to soldering heat**
Max three 40 second refills at +260°C, parts cooled to room temperature between cycles

**Moisture Sensitivity Level (MSL)**
1 (unlimited floor life at <30°C / 85% relative humidity)

**Packaging**
175/13” reel; Plastic tape: 32 mm wide, 0.5 mm thick, 24 mm pocket spacing, 14.3 mm pocket depth

**PCB washing**
Tested to MIL-STD-202 Method 215 plus an additional aqueous wash. See Doc787_PCB_Washing.pdf.

1. When ordering, please specify packaging code: JA4590-AL_D
   - **Packaging:**
     - **D** = 13” machine-ready reel. EIA-481 embossed plastic tape (175 parts per full reel). Quantities less than full reel available: in tape (not machine ready) or with leader and trailer ($25 charge).
     - **B** = Less than full reel. In an effort to simplify our part numbering system, Coilcraft is eliminating the need for multiple packaging codes. When ordering, simply change the last letter of your part number from B to D.

2. Inductance shown for each winding, measured at 100 kHz, 0.1 Vrms, 0 Adc on an Agilent/HP 4284A LCR meter or equivalent. When leads are connected in parallel, inductance is the same value. When leads are connected in series, inductance is four times the value.

3. DCR is for each winding. When leads are connected in parallel, DCR is half the value. When leads are connected in series, DCR is twice the value.

4. SRF measured using an Agilent/HP 4191A or equivalent. When leads are connected in parallel, SRF is the same value.

5. Leakage inductance is for one winding.

6. DC current, at which the inductance drops 20% (typ) from its value without current. It is the sum of the current flowing in both windings.

7. Equal current when applied to each winding simultaneously that causes a 40°C temperature rise from 25°C ambient.

8. Maximum current when applied to one winding that causes a 40°C temperature rise from 25°C ambient.

Refer to Doc 639 “Selecting Coupled Inductors for SEPIC Applications.” Refer to Doc 362 “Soldering Surface Mount Components” before soldering.
