Shielded Power Inductors – XGL5050

- Industry’s lowest DCR and ultra low AC losses over a wide frequency range
- AEC-Q200 Grade 1 (–40°C to +125°C)
- Superior current handling with soft saturation characteristics
- Wide inductance range – 0.16 to 33 µH
- Designer’s Kit C500 contains 3 of each part

Core material: Composite
Core and winding loss: See www.coilcraft.com/coreloss
Environmental: RoHS compliant, halogen free
Terminations: RoHS compliant tin-silver (96.5/3.5) over copper. Other terminations available at additional cost.
Weight: 0.77 – 0.87 g
Operating voltage: 0 – 80 V
Ambient temperature: –40°C to +125°C with (40°C rise) Irms current.
Maximum part temperature: +165°C (ambient + temp rise). Derating.
Storage temperature: Component: –55°C to +165°C. Tape and reel packaging: –55°C to +80°C
Resistance to soldering heat: Max three 40 second reflows at +260°C, parts cooled to room temperature between cycles
Moisture Sensitivity Level (MSL): 1 (unlimited floor life at <30°C / 85% relative humidity)
Packaging: 250/7″ reel; 750/13″ reel Plastic tape: 16 mm wide, 0.30 mm thick, 12 mm pocket spacing, 5.21 mm pocket depth

Typical L vs Frequency

Recommended Land Pattern

For optional tin-lead and tin-silver-copper terminations, dimensions are for the mounted part. Dimensions before mounting can be an additional 0.005 inch / 0.13 mm.

Dimensions are in inches / mm

1. When ordering, please specify termination and packaging codes:

   **XGL5050-333ME**

   - **Termination:** E = RoHS compliant tin-silver over copper.
     Special order: T = RoHS tin-silver-copper (95.5/4/0.5) or S = non-RoHS tin-lead (63/37).
   - **Packaging:** C = 7” machine-ready reel. EIA-481 embossed plastic tape (250 per full reel).
     Quantities less than full reel available: in tape (not machine ready) or with leader and trailer ($25 charge).
   - D = 13” machine-ready reel. EIA-481 embossed plastic tape (750 per full reel).
     Factory order only, not stocked.

2. Inductance tested at 1 MHz, 0.1 Vrms, 0 Adc.
3. DCR measured on a micro-ohmmeter.
4. SRF measured using Agilent/HP 4395A or equivalent.
5. DC current at 25°C that causes the specified inductance drop from its value without current. Click for temperature derating information.
6. Current that causes the specified temperature rise from 25°C ambient. This information is for reference only and does not represent absolute maximum ratings. Click for temperature derating information.
7. Electrical specifications at 25°C. Refer to Doc 362 "Soldering Surface Mount Components” before soldering.

---

**Irm Testing**

Irm testing was performed on 0.75 inch wide × 0.25 inch thick copper traces in still air.

Temperature rise is highly dependent on many factors including pcb land pattern, trace size, and proximity to other components. Therefore temperature rise should be verified in application conditions.
Shielded Power Inductors – XGL5050

L vs Current

- Inductance vs Current graph for different values of µH (microHenry) against Current (Ampere) for various inductors ranging from 0.16 µH to 1.8 µH.
