1. Inductance measured between secondary pins at 10 kHz, 0.1 Vrms, 0 Adc.
 2. Maximum volt-time product is for the secondary, based on 2000 Gauss.
 3. Primary current of 40 A causes less than 40°C temperature rise from 25°C ambient. Higher current causes a greater temperature rise (see Temperature Rise vs Current curve).
 4. Terminating resistance (R_T) value is based on 1 Volt output with 40 Amps flowing through the primary. Varying terminating resistance increases or decreases output Voltage/Ampere according to the following equation:
 $R_T = V_{out} \times N_{sec} / I_{in}$.
 5. Electrical specifications at 25°C .
- Refer to Doc 362 "Soldering Surface Mount Components" before soldering.
