Shielded Coupled Inductors LPD6235

Tight coupling (k ≥ 0.97) makes the LPD6235 series of coupled inductors ideal for use in a variety of circuits including flyback, multi-output buck, SEPIC and Zeta. These coupled miniature shielded inductors are 3.5 mm high and 6.0 mm square. They provide high inductance, high efficiency and excellent current handling in low cost part. They can be used as two single inductors connected in series or parallel, as a common mode choke or as a 1 : 1 transformer.

1. Please specify termination and packaging codes:
   - LPD6235-205MR

   **Termination:** R = RoHS compliant matte tin over nickel over silver.
   Special order:
   - E = RoHS compliant Silver-palladium-platinum-glass frit.
   - P = non-RoHS tin-lead (63/37)
   - Q = RoHS tin-silver-copper (95.5/4.0/0.5)

   **Packaging:**
   - C = 7” machine-ready reel. EIA-481 embossed plastic tape (350 parts per full reel). Quantities less than full reel available: in tape (not machine ready) or with leader and trailer ($25 charge).
   - B = Less than full reel. In an effort to simplify our part numbering system, Coilcraft is eliminating the need for multiple packaging codes. When ordering, simply change the last letter of your part number from B to C.
   - D = 13” machine-ready reel. EIA-481 embossed plastic tape. Factory order only, not stocked (1500 parts per full reel).

2. Inductance shown for each winding, measured at 100 kHz, 0.1 Vrms, 0 Adc on an Agilent/HP 4284A LCR meter or equivalent. When leads are connected in parallel, inductance is the same value. When leads are connected in series, inductance is four times the value.

3. DCR is for each winding. When leads are connected in parallel, DCR is half the value. When leads are connected in series, DCR is twice the value.

4. SRF measured using an Agilent/HP 4191A or equivalent. When leads are connected in parallel, SRF is the same value. When leads are connected in series, inductance is four times the value.

5. Leakage inductance is for L1 and is measured with L2 shorted.

6. DC current at 25°C that causes the specified inductance drop from its value without current. It is the sum of the current flowing in both windings.

7. Equal current when applied to each winding simultaneously that causes a 40°C temperature rise from 25°C ambient. This information is for reference only and does not represent absolute maximum ratings.

8. Maximum current when applied to one winding that causes a 40°C temperature rise from 25°C ambient. This information is for reference only and does not represent absolute maximum ratings.

Coupled Inductor Core and Winding Loss Calculator
This web-based utility allows you to enter frequency, peak-to-peak (ripple) current, and Irms current to predict temperature rise and overall losses, including core loss. Visit www.coilcraft.com/coupledloss.

Core material: Ferrite
Weight: 420 – 480 mg
Environmental: RoHS compliant, halogen free
Terminations: RoHS compliant matte tin over nickel over silver.
Other terminations available at additional cost.
Ambient temperature: –40°C to +125°C (ambient + temp rise).
Maximum part temperature: +165°C (ambient + temp rise).
Storage temperature: Component: –40°C to +165°C.
Tape and reel packaging: –40°C to +80°C
Winding to winding isolation: 100 Vrms, one minute
Resistance to soldering heat: Max three 40 second reflows at +260°C, parts cooled to room temperature between cycles
Moisture Sensitivity Level (MSL): 1 (unlimited floor life at <30°C / 85% relative humidity)
Packaging: 350/7” reel; 1500/13” reel Plastic tape: 16 mm wide, 0.3 mm thick, 12 mm pocket spacing, 3.68 mm pocket depth
Recommended pick and place nozzle: OD: 6.2 mm; ID: ≤ 3.1 mm
