Dual Inductors for Class-D

- Dual inductors for use in Class-D output filters
- A single shielded package contains both coils.
- Very low magnetic coupling
- AEC-Q200 Grade 1 (−40°C to +125°C)
- SMT (HA4158-EL) and through-hole (JA4575-BL) versions
- HA4158-BL and JA4575-AL not recommended for new designs
- Designed for low distortion and the best sound quality

Core material Ferrite
Terminations RoHS compliant tin-silver (96.5/3.5) over copper.
Weight 5.0 g
Ambient temperature −40°C to +125°C with Irms current
Maximum part temperature +165°C (ambient + temp rise)
Storage temperature Component: −40°C to +165°C.
Tape and reel packaging: −40°C to +80°C
Resistance to soldering heat Max three 40 second refows at +260°C, parts cooled to room temperature between cycles
Moisture Sensitivity Level (MSL) 1 (unlimited floor life at <30°C / 85% relative humidity)
PCB washing Tested to MIL-STD-202 Method 215 plus an additional aqueous wash. See [Doc787_PCB_Washing.pdf](#).

1. When ordering, please specify **packaging** code:

- **HA4158-ELD**
- **JA4575-BLD**

Packaging:
- D = 13” machine-ready reel. EIA-481 embossed plastic tape. Quantities less than full reel available: in tape (not machine ready) or with leader and trailer ($25 charge).
- B = Less than full reel. In an effort to simplify our part numbering system, Coilcraft is eliminating the need for multiple packaging codes. When ordering, simply change the last letter of your part number from B to D.

2. Maximum power into specified load that causes less than a 40°C temperature rise. Measured at 1 kHz with a 14.4 Vdc supply for the 2-Ohm load and a 21 Vdc supply for the 4-Ohm load. Refer to Output Power table for typical output conditions. Tested using the TAS5414A Evaluation Board from Texas Instruments.

3. Inductance measured at 100 kHz, 1.0 Vrms, 0 Adc using an Agilent/HP 4284A impedance analyzer.

4. DCR is for each winding, measured on a micro-ohmmeter.

5. SRF measured using Agilent/HP 8753D network analyzer.

6. Total harmonic distortion + noise measured at 20 W into a 2-Ohm or 4-Ohm load at 1 kHz with a 21 Vdc supply.

7. DC current (typical) at which the inductance drops the specified amount from its value without current.

8. Current applied to both windings at the same time that causes the specified temperature rise from 25°C ambient. This information is for reference only and does not represent absolute maximum ratings.

Class-D Dual Inductors
L vs Current

HA4158-EL (SMT version)

Recommended Land Pattern
with a 0.006 inch/0.1524 mm solder screen thickness

Packaging
400/13” reel Plastic tape: 24 mm wide, 0.5 mm thick, 16 mm pocket spacing, 10.8 mm pocket depth

JA4575-BL (Through-hole version)

Recommended PC Board Layout

Packaging
250/13” reel Plastic tape: 24 mm wide, 0.5 mm thick, 20 mm pocket spacing, 13.84 mm pocket depth

Dimensions are in inches/mm

Parts manufactured prior to December 2011 may be marked differently.
