Shielded Coupled Inductors  LPD5010

The LPD5010 coupled miniature shielded inductors are mere 1 mm high and 5 mm square. They are ideal for use in a variety of circuits including flyback, multi-output buck, SEPIC and Zeta.

These inductors provide high inductance, high efficiency and excellent current handling in a rugged, low cost part. They can also be used as two single inductors connected in series or parallel or as a common mode choke.

---

**Recommended Land Pattern**

*Dimensions are of the case not including the termination. For maximum overall dimensions including the termination, add 0.005 in / 0.13 mm.

For optional tin-lead and tin-silver-copper terminations, dimensions are for the mounted part. Dimensions before mounting can be an additional 0.005 in / 0.13 mm.

---

For medical or high risk applications, please contact Coilcraft prior to purchase.

1. Please specify termination and packaging codes:
   - LPD5010-224MR
   - Termination: R = RoHS compliant matte tin over nickel over silver.
   - Special order: Q = RoHS tin-silver-copper (95.5/4/0.5) or P = non-RoHS tin-lead (63/37).
   - Packaging: C = 7” machine-ready reel, EIA-481 embossed plastic tape (1000 parts per full reel).
   - B = Less than full reel. In tape, but not machine ready. To have a leader and trailer added ($25 charge), use code letter C instead.
   - D = 13” machine-ready reel. EIA-481 embossed plastic tape. Factory order only, not stocked (3500 parts per full reel).

2. Inductance shown for each winding, measured at 100 kHz, 0.1 Vrms, 0 Adc on an Agilent/HP 4284A LCR meter or equivalent. When leads are connected in parallel, inductance is the same value. Leads are connected in series, inductance is four times the value.

3. DCR is for each winding. When leads are connected in parallel, DCR is half the value. When leads are connected in series, DCR is twice the value.

4. SRF measured using an Agilent/HP 4191A or equivalent. When leads are connected in parallel, SRF is the same value. When leads are connected in series, inductance is four times the value.

5. DC current at 25°C that causes the specified inductance drop from its value without current. It is the sum of the current flowing in both windings.

6. Equal current when applied to each winding simultaneously that causes a 40°C temperature rise from 25°C ambient. This information is for reference only and does not represent absolute maximum ratings.

7. Maximum current when applied to one winding that causes a 40°C temperature rise from 25°C ambient. This information is for reference only and does not represent absolute maximum ratings.

8. Core material: Ferrite

9. Recommended pick and place nozzle OD: 5 mm; ID: ≤ 2.5 mm

Coupled Inductor Core and Winding Loss Calculator

This web-based utility allows you to enter frequency, peak-to-peak (ripple) current, and Irms current to predict temperature rise and overall losses, including core loss. Go to online calculator.

Core material: Ferrite

Weight: 60 – 70 mg

Environmental: RoHS compliant, halogen free

Terminations: RoHS compliant matte tin over nickel over silver. Other terminations available at additional cost.

Ambient temperature: –40°C to +85°C with (40°C rise) Irms current.

Maximum part temperature: +125°C (ambient + temp rise).

Storage temperature: Component: –40°C to +125°C.

Tape and reel packaging: –40°C to +80°C

Mean Time Between Failures (MTBF): 365,789 hours

Weight: 60 – 70 mg

Resistances to soldering heat: Max three 40 second refloWS at +260°C, parts cooled to room temperature between cycles

Moisture Sensitivity Level (MSL): 1 (unlimited floor life at <30°C / 85% relative humidity)

Mean Time Between Failures (MTBF): 26,315,789 hours

Recommended pick and place nozzle OD: 5 mm; ID: ≤ 2.5 mm

PCB washing: Tested with pure water or alcohol only. For other solvents, see Doc787_PCB_Washing.pdf.
